

Carriage Rollers

Carriage Roller - Carriage rollers are specially designed bearings that are utilized on lift masts to be able to help them perform in difficult environmental surroundings. Lift masts are normally subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences such as cold, heat, dust, moisture, contamination and aggressive ambient air. Therefore, the lift masts' guidance arrangements need to be particularly strong and have a certain high load carrying capability.

In order to help compete in numerous different environmental conditions, carriage rollers were designed for several lift masts. While having the ability to handle a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the lift masts' guidance arrangements.
